

IN THE CLAIMS

The following is a detailed listing of all claims that are, or were, pending in the present application. Please cancel claims 1-21 and add claims 22-38 as follows:

Claims 1-21 (cancelled).

22. (new) An amusement device comprising:

- B1
- (a) a body;
 - (b) features carried by the body;
 - (c) means for powering the device and at least some of the features, said means for powering carried by the body;
 - (d) a swipe card reader, said swipe card reader carried by the body; and
 - (e) a microprocessor operably coupled to the means for powering and the swipe card reader.

23. (new) The device of claim 22 further comprising an information card configured to be swiped through the swipe card reader, the information card comprising:

- (a) card game information displayed on the face of the information card; and
- (b) device actuation information, the device actuation information configured to be transmitted to the microprocessor.

24. (new) The device of claim 22 further comprising armor configured to be attachable to the body of the device.

25. (new) A transforming interactive amusement device comprising:

- (a) a body;
- (b) at least two transport elements moveably connected to the body;
- (c) at least two arms moveably connected to the body;
- (d) a motor associated with the body, the motor operably coupled to the at least two transport elements;

Cont

B1

- (e) a microprocessor operably coupled to the motor, the microprocessor being adapted to command the motor to perform an action;
 - (f) a swipe card reader associated with the body, the swipe card reader adapted to receive enhancement data from a swipe card and transmit the enhancement data to the microprocessor, wherein the enhancement data enhances a function of the device;
 - (g) a wireless receiver associated with the body, the wireless receiver adapted to receive a wireless communication and transmit the wireless communication to the microprocessor;
 - (h) a unit wireless transmitter associated with the body, the unit wireless transmitter operably coupled with the microprocessor and capable of wireless communication with a second interactive amusement device; and
 - (i) a remote wireless transmitter operably coupled by wireless communication with the wireless receiver;
- wherein the device transforms into at least two different forms.

26. (new) The amusement device of claim 25 further comprising a swipe card configured to be swiped through the swipe card reader, the swipe card comprising:

- (a) card game information displayed on the face of the swipe card; and
- (b) the enhancement data.

27. (new) An interactive amusement device comprising:

- (a) a body;
- (b) a launchable element connected to the body;
- (c) a launch mechanism associated with the body, wherein the launch mechanism is operably coupled to the launchable element;
- (d) a motor operably coupled to the launch mechanism, wherein selective actuation of the motor launches the launchable element; and
- (e) a swipe card reader operably coupled to the motor, the swipe card reader configured to actuate the motor upon receiving a swipe card.

28. (new) A game method comprising:

providing at least two information carrying cards, the cards comprising:

card game information displayed on the face of each of the at least two
information carrying cards; and

device actuation information, the device actuation information configured
to actuate physical activity in an amusement device;

distributing the cards to at least two players; and

the at least two players using the game information to compete in a card game.

29. (new) The game according to claim 28, wherein the physical activity of the amusement device coincides with the card game being played with the information carrying cards.

30. (new) The game according to claim 28, wherein the information carrying cards are collectable.

31. (new) The game according to claim 28, wherein the information carrying cards are swipe cards.

32. (new) An interactive amusement system capable of performing at least two functions and comprising:

- (a) a body;
- (b) a motor associated with the body;
- (c) a microprocessor operably coupled to the motor, the microprocessor being adapted to command the motor to perform an action;
- (d) a wireless receiver associated with the body, the wireless receiver adapted to receive a wireless communication and transmit the wireless communication to the microprocessor;
- (e) a unit wireless transmitter associated with the body, the unit wireless transmitter operably coupled with the microprocessor and capable of wireless communication with a second interactive amusement device;

Cont
B1

- (f) a remote wireless transmitter operably coupled by wireless communication with the wireless receiver; and
- (g) a swipe card reader associated with the body, the swipe card reader adapted to receive data from a swipe card and transmit the data to the microprocessor, wherein the data provides for changing the at least two functions, the changes being selected from the group consisting of:
 - (1) changed number of functions; and
 - (2) changed speed of functions.

33. (new) The interactive amusement system according to claim 32, wherein the swipe card comprises game information on a face of the swipe card, wherein the game information is configured to be used in a card game.

34. (new) The interactive amusement device of claim 32, further comprising a control switch associated with the body, the control switch being configured to actuate at least one of the at least two functions.

35. (new) The interactive amusement device of claim 34, wherein the control switch is configured to shut down the amusement device.

36. (new) An interactive amusement device comprising:
- (a) a body;
 - (b) a launchable element associated with the body;
 - (c) a launch mechanism associated with the body, the launch mechanism configured to propel the launchable element away from the body;
 - (d) a motor operably coupled to the launch mechanism, wherein selective actuation of the motor launches the launchable element; and
 - (e) a swipe card reader configured to read a swipe card, whereby the motor is selectively actuated.

Cont
B1

37. (new) A transformable interactive amusement device, comprising:
- (a) a body;
 - (b) a motor associated with the body;
 - (c) a microprocessor operably coupled to the motor, the microprocessor configured to actuate the motor to propel an action;
 - (d) a swipe card reader configured to read a swipe card whereby the microprocessor is actuated; and
 - (e) at least two moveable elements moveably coupled to the body, the at least two moveable elements operably coupled to the motor, wherein the body and the at least two moveable elements are reconfigurable whereby the device is transformable.

38. (new) The device of claim 37, further comprising at least two couplings configured to couple the at least two moveable elements to the body, wherein the at least two couplings are configured to allow the body and the at least two moveable elements to be reconfigurable.
